Sensing Fields(Typical)

If detecting target with a smaller size than the standard target, the sensing distance will become shorter.

Sensors Embeded in Metal

If the sensor is completely embeded in metal, its sensing distance may decrease thus it shall be established with the following values as shown at Table1.

(Table 1.)

(Unit mm)

	Non-Shield			Shield		
	S□□-12M□ (8M)	S□□-18M□	S□□-30M□	S□□-12MS □ (8MS)	S□□-18MS□	S□□-30MS□
C	15(8)	22	30	0	0	0
D	36(24)	54	90	12(8)	18	30
E	20(6)	40	70	8(4.5)	20	40
F	40(24)	70	90	18(12)	27	45

Mutual Interference

When mounting plural proximity switches in parallel or face to face, allow the clearance listed in the table2. below to avoid mutual interference.

(Table 2.)

	Non-Shield			Shield		
	S□□-12M□ (8M)	S□□-18M□	S□□-30M□	S□□-12MS □ (8MS)	S□□-18MS□	S□□-30MS□

B	36(24)	54	90	24(16)	36	60

Sensing distance, Correction coefficient

The sensing distance listed in this specifications is for the standard target. For non-ferrous object detection, the sensing distance will be obtained by multiplying the correction coefficient.
